

Assessments

We assist you in the planning, implementation, and optimisation of your wind farm project and provide you with assessments at each planning stage. Whether you are interested in a first estimation of the wind resource and energy yield at your location, intend to present your project to legal authorities and investors or wish the evaluation of an existing wind farm – onshore or offshore – we are there for you!

What assessments do we offer?

- Accredited and bankable wind resource and energy yield assessments according to TR6 for on- and offshore projects – worldwide *
- Turbulence assessments in compliance with the requirements of IEC 61400 and DIBt-guidelines
- Accredited sound immission assessments in accordance with TA-Lärm, DIN ISO 9613-2 *
- Shadow flicker assessments corresponding to the recommendations of the Federal Committee for Air Pollution Control (LAI)
- Climatological analyses and risk assessments for wind farm projects
- Optimisation of wind farms considering legal requirements, turbulence intensity, and park efficiency
- Long-term referencing of wind- and energy yield data *
- Energy yield evaluation for existing wind farms

* Accredited service
