

Wind and Solar Power Forecasts

In contrast to energy generated by fossil fuels or nuclear power, the energy amount originating from renewable sources cannot be fully controlled. For the power industry, however, high planning certainty is extremely important. EuroWind has the remedy: We are making renewables predictable! Tailored towards your specific needs, EuroWind generates accredited forecasts for individual wind and solar farms, for entire portfolios or on the basis of control areas or countries.

What do our power forecasts offer?

- Multi-model forecasts on the basis of the renowned weather models ECMWF, HIRLAM, UKMET, GFS
- Up to 8 forecast updates per day
- Forecast horizon: up to 192 hours (8 days)
- Time resolution: up to 15 minutes
- Power forecasts at country level, available for 28 (wind) or 8 (solar) European countries
- Electronic data transmission, e. g. via (S)FTP, SOAP web service or E-mail
- Graphical web interface spotrenewables.com
